SUMMARY

As a passionate software developer with a degree in Computer Science and a focus on Application Development, I have a deep love for the Android platform and a desire to continuously gain more experience in this amazing universe. I am always eager to learn and apply new technologies and techniques to create apps that can positively impact people's lives. In addition to my passion for software development, I also have a keen interest in 3D printing and climbing. My diverse set of interests and skills make me a versatile and valuable addition to any team.

PROFESSIONAL EXPERIENCE

Senior Android Engineer

Wunderman Thompson Apps   📅 Sep 2022 – Ongoing

- Resolved bugs and added features to improve an airline app's user experience.
- Created a proof of concept app used in a TV commercial, demonstrating innovative thinking and high-quality work.
- Developed four apps for energy companies, delivering efficient and effective solutions tailored to their needs.

| Kotlin | Java | React Native | Clean Architecture | MVVM | MVP |

| Javascript | Typescript | Airship |

Mobile Software Developer

Frotcom – Intelligent Fleets   📅 Feb 2019 – Sep 2022

- Part of the team responsible for designing, developing, and testing mobile applications.
- Built pipelines on Jenkins for streamlined app deployment.
- Successfully migrated codebase to Kotlin and added unit/UI tests for stability and robustness.
- Planned migration from MVP to MVVM architecture, improving app performance and reducing complexity.
- Preemptively planned for migrations to the latest Android versions for up-to-date features and security.
- Led the way in achieving zero memory leaks, improving app performance and stability.

- Served as tech lead, guiding and mentoring team members for optimal results.
- Helped with iOS app development as needed, showcasing versatility and adaptability.

Kotlin Java Swift MVP MVVM JUnit Espresso

Firebase Notifications Retrofit Google API's Mockito Leak Canary

Jenkins Sonarqube

Java Developer

La Redoute 📅 Apr 2017 – Feb 2019

- Converted outdated procedures to new Web Services and created Java Batch programs.
- Successfully updated and maintained Cobol programs older than me.
- Modernized the company's infrastructure using the Elastic Stack.
- Contributed to modernizing and improving the company's systems and operations.

AS400 (Cobol) Java (Java 7, Java 8) Spring JUnit SOAP WebServices

REST WebServices Mockito Elastic stack (Elasticsearch, Logstash, Kibana)

SQL (DB2, PostgreSQL, Oracle)

Android Wear Developer

YouShip 📅 Sep 2016 – Feb 2017

- Developed and managed the Android Wear application from scratch for a crowdsource delivery solution, dubbed "the Uber of cargo" by the press.
- Solely managed the entire native Android Wear application lifecycle.
